TextDeveloper(s)Robert Topal from RobTopGamesPublisher(s)RobTop GamesEngineCocos 2D-X (heavily modified Unity 4)Platform(s)Windows MacOSReleaseAugust 13, 2013Genre(s)Platformer GameMode(s)Multiplayersingle-player Geometry Dash (also known as GD or GMD) is a rhythm-based platformer game developed and published by RobTop Games. It started being sold for \$2.00 USD on August 13 2013, and is a 2D platformer game that involves dodging obstacles (spikes, walls, and creatures) in a series of levels. Players can create levels in the level editor, and play levels made by other players. There are many tools for creating levels: rings (commonly just called orbs) that let you jump mid air, pads that boost you up higher, and triggers that allow the level creator t The player moves towards the right of the screen automatically in the game's classic mode, whereas the player has full control of their movement in platformer mode (released in the latest update, 2.2). There are gamemodes that the player can turn into: Ship, Ball, UFO, Wave, Robot, Spider, and Swing. All of these gamemodes have unique physics, and their own customisable icons! Geometry Dash is available on Steam, and Mobile. The player can use the keyboard, touch screen, controller, mouse, etc. to control the icon. Unlocking new icons requires collecting each of the games different currencies, and can be done by completing quests, lists and certain levels (daily, weekly, gauntlet) for diamonds, completing map packs and official levels for secret coins (or star rated levels for user coins) and star rated / official levels for stars (with platformer levels rewarding moons instead). Beating or progressing any star rated level also grant mana orbs (a feature introduced in update 2.1). The Geometry Dash user-made levels range in difficulty from auto to demon (at its peak, extreme demon) with thousands of levels to explore. Wikimedia Commons has media related to Geometry Dash. It was released on 13 August 2013 for iOS and Android, with versions for Windows and macOS following on 22 December 2014. The player controls an icon to navigate music-based levels, avoiding obstacles like spikes.[citation needed] The game comprises 26 full-length levels created by the developer: 22 are auto-scrolling, and 4 are 'platformer' levels. The game includes a level creation system, enabling players to design custom levels, share them online, and play levels created by other users. Players can collect in-game currency—such as stars, moons, coins, mana orbs and diamonds—from official and user-generated levels or chests. Three spin-off games accompany the main series: Geometry Dash Meltdown, Geometry Dash World and Geometry Dash SubZero. Geometry Dash Lite is a free version of the main game that removes certain levels and icons, the level editor, and many online features. Both the spin-off games and Geometry Dash Lite contain advertisements. The game was praised for its challenging but addictive gameplay. It has spawned a large community of players and creators.[1] The beginning of 'Electroman Adventures', the 13th level in the game Geometry Dash can be played using a touchscreen, keyboard, mouse or controller. The player, represented by a customisable icon, is controlled by pressing or holding inputs to navigate through auto-scrolling levels until the end is reached. The level restarts from the beginning if the player collides with an obstacle, such as a spike or wall. A 'practice mode' option allows the player to place checkpoints to help with level familiarity, however, progress cannot be earned towards normal level completion. The in-game music's timing and rhythm are crucial. The game's level synchronizing, where the player's movement is synchronized with the audio, is one of the game's most notable features. Besides the aforementioned obstacles, other gameplay elements also effect the movement of the player icon, including portals, pads, and orbs that change the player's gravity, speed, size, and gamemode. The player's gamemode, or vehicle, determines the motion of the player icon; for example, in the "cube" gamemode (the first gamemode introduced in Geometry Dash), the player jumps a predetermined height upon a single input. The "ball" gamemode switches the player's gravity, while in the "wave" gamemode, the player icon only moves in diagonal lines. Portals and pads affect the player when they pass through them, while orbs affect the player only if they make an input while passing through them. The full version of Geometry Dash includes 26 main levels, 4 of which are platformer levels. Each level is assigned one of six difficulties: "Easy", "Normal", "Hard", "Harder", "Insane", and "Demon". Each main level contains three secret coins, requiring the player to take a different pathway to obtain them. There are three demon levels among the main levels, and the player must obtain a number of secret coins before they can be played. Each level rewards players upon completion.[2][4] Player icons can be customized: Icosane, primary and secondary colors, death explosion effects and ship trails can be changed. These customization options can be unlocked by completing main levels, collecting enough secret coins, earning achievements or buying them in the shop.[5] The full version of the game features the ability to upload and play user-created levels, with Lite and World offering a rotating selection of 20 user-created levels.[6] These levels may use music from the official levels or feature custom music that can be imported from Newgrounds. From 2017 onwards, user-made 'demon' levels are divided into five additional difficulties: "Easy Demon", "Medium Demon", "Hard Demon", "Insane Demon", and "Extreme Demon". Many of them are significantly more challenging than the hardest main level, "Deadlocked". Certain levels feature user coins, which are collected in a similar way to secret coins.[7] User-made levels of sufficient quality may be officially "rated" by Topala. Playing a rated level awards orbs and diamonds, in-game currency that can be used to purchase additional player icons. Upon completing a rated level, the player receives a certain number of stars', which correspond to the difficulty of the level. Unlike orbs or diamonds, stars cannot be used to purchase items. Update 2.2 introduces the 'platformer' mode, where players move left or right without the auto-scrolling camera. Upon completing a rated platformer level, the player receives 'moons' instead of stars. Like stars, moons are not used to purchase collectibles. Platformer mode features the same gamemodes as in regular Geometry Dash, with the exception of the wave and the swing, which are absent, and the ship, which is replaced by the similarly functioning 'jetpack'. There are four official platformer levels, located in a section of the game called 'The Tower'. RobTop Games logo Geometry Dash was created by Swedish video game developer Robert Topala, known professionally as RobTop. On 6 June 2010, Topala created his first video game, Bounce Ball Thingy, on Newgrounds, developing it while he was at university studying civil engineering. He abandoned his course because he became more interested in the video game industry.[8] Topala decided to work alone, founding RobTop Games in 2012. The first version game he produced under RobTop Games was Boomlings, a puzzle video game released on 5 November 2012 for mobile devices.[9][10] Topala continued to create video games, including Memory Mastermind (2013) and Boomlings MatchUp (2013).[11][12] According to Topala, the game began as a project that could have moved in any direction. He remarked, "I simply started as a template with a cube that could crash and jump"; There really was no detailed plan "[13] He previously developed it for the computer and later altered his plan and made attempts to make it a mobile game. The Impossible Game inspired Topala, and it took about four months to create the game and bring it to the App Store and Google Play Store. In the beta version, the game was called Geometry Jump but later changed to Geometry Dash. The game is developed on the Cocos2d game engine.[14] A trailer was released on 29 April 2013, featuring a level using the song Ultimate Destruction (made by Tmm43). The song is not present in the final game, but the level was later redesigned into the fifth official level, called Base after Base.[15] Upon its release, Geometry Dash had seven levels and two game modes.[7] It gained popularity worldwide, especially in Canada, becoming the most popular iPad iPhone app in June 2014.[16] There are four free versions of the game, one being Geometry Dash Lite, which includes 23 levels from the full version, including the tower levels.[4] The game has received regular updates, adding new levels, game modes, player icons and other features.[7] Sneak peeks are released on YouTube, showing clips of features from new updates. Spin-off games were released in order to promote some
updates, with Meltdown, World and SubZero, featuring content from versions 2.0, 2.1, and 2.2, respectively. After multiple delays, update 2.2 was released on December 19, 2023, for all platforms. The update was heavily anticipated, taking over 6 years to develop. The update added a brand new platformer mode, allowing the player to control the character's horizontal movement instead of the level automatically scrolling to the right. Upon the release, the game hit a peak of 80,000 simultaneous players on Steam, a new record. With the updated level editor having numerous additions, people were able to recreate entire games, such as Super Mario Kart, using only in-game objects.[1][17][18] Stereo Madness, a song that plays on the exponentially first level. The music of Geometry Dash was produced by a variety of different artists, with some tracks being licensed and others produced specifically for the game, including ones made by Robert Topala himself. Certain menu sections feature royalty-free compositions by Kevin MacLeod. The music that plays during levels consists mostly of EDM and other electronic genres.[11] Tracks may be cut in order to fit the length of the level, which is usually around 1–2 minutes. The game received generally positive reviews from critics. Softpedia complimented the game's style and the challenge it brings up, saying, "While it can get a bit frustrating sometimes, you can always complete the stages using the practice mode and then jump into the many different user-generated levels"[19] 148Apps also gave the game a positive review, stating, "Geometry Dash provides a lot of the challenge expected from an 'impossible' game while also making it more accessible to newcomers"[20] Geometry Dash has been listed by the reviewer Chris Morris on the website Common Sense Media as a child-friendly video game that parents could let their children play on, stating that the game was a 'good way to handle frustration' and that 'families can also talk about rhythm and the joy of dancing in time with music'[21] Geometry Dash was the second-best and seventh-best-selling iPad and iPhone game in the App Store in 2018.[22] Year Video game Platform Ref(s). 2013 Geometry Dash 2013: iOS, Android; 2014: Microsoft Windows, macOS [23][24] Geometry Dash Lite iOS, Android [25] 2015 Geometry Dash Meltdown [26][27] 2016 Geometry Dash World [28] 2017 Geometry Dash SubZero [29] Geometry Dash Lite is a free version of the game with advertisements and gameplay restrictions. Geometry Dash Lite includes only main levels 1–19, all tower levels, and a few selected levels that are either Featured, Daily, weekly or Event levels but does not offer the option to create levels or play most player-made levels. It also has a significantly more limited selection of character customisation options, lacking many icons, colours, and other character effects in the full game.[30][31] On 16 December 2015, Topala announced a spin-off game, Geometry Dash Meltdown,[32] which was released on 19 December 2015 for iOS and Android.[33][34] It includes three levels featuring songs by F-777. The game showcased new icons and features in levels added in version 2.0 of the original game. On 21 December 2016, Topala announced a second spin-off game, Geometry Dash World,[35] saying it would come out on the same day. It includes two five-level worlds, introducing features that came to the original game later in update 2.1.[36][37] It also features a selection of levels created by other players. Gamezebo praised the game's captivation and decent gameplay styles. Although, the reviewer noted that it was not the "most interesting looking game out there"[38] Gerson Noboa from AndroidGuys said, "Geometry Dash World is a worthy addition to your game arsenal. Thanks to tightly connected graphical and sound elements, the game provides an awesome, intense experience that is rarely seen in "Easy, Story games".[39] On 12 December 2017, Topala announced a third spin-off game, Geometry Dash SubZero,[40] which was released on 21 December 2017.[41][42] Geometry Dash SubZero levels all contain features present in update 2.2, despite the update's release date being years later.[43] ^ a b c Etinger Garrett (22 December 2023). If you are at home and have nothing to do, bored also, and you need some enjoyment, then you think of someone amazing who has an interest in you. I will tell you about an exclusive Android game called Geometry Dash APK. Geometry Dash 2.2 APK has been a free game for players for a long time. You can get all the features of the original version, like editor, customization, challenges, etc. Geometry Dash levels all have an interesting platform where simple and challenging
gameplay, unique graphics, and sharp turns attract players of all ages. Released by RobTop Games, the Geometry Dash APK full version offers a unique experience with its amazing geometric style and intense levels. You can download Geometry Dash from its official app store. There is no limitation on the Geometry Dash premium version. Geometry Dash Android gives players everything to play all levels. You can play Geometry Dash's latest version at any time, any place all over the world. The Geometry Dash APK 2.2 Android version is a great platform to avail enjoyment and fun, where players are playing for a long time everywhere. After downloading Android Geometry Dash APK 2.2, you can enjoy much more. Geometry dash apk full version is packed with new features, new adjustments, and fixes to your gaming experience. The complete version of Geometry Dash 2.2 provides players full access to its features and levels. Features of geometry dash apk The rest of the multitude square and rhythmically jumping on the tumblers. But it quickly grew into much more. Every update release came with the introduction of new levels, features, vehicles and game modes. Later on, RobTop himself popularized the level editor, which allowed players to generate and share their own levels and made the game more of a community driven game. It was in 2017 also, with the patch 2.1 release that new elements such as new gameplay mechanics, secret coins and the Spider vehicle were added. This expansion was important as it broadened the already rich gameplay offered by the game as well as improved replayability. The last time we saw a hint of the developments was when 2.2 was released in the year 2024. This patch is said to carry features that expand on what the moniker platformer has come to be known for, and you can now enjoy Geometry Dash 2.2 APK on your mobile devices. The question on everyone's mind, how is it played? Simply put, this is a rhythm-based platformer. A player is presented with a small square avatar on a map where the only button that is pressed because the character cannot come to a stop, is the jump button. The level is designed so that the beats of the music coincide perfectly with the jumps, which heightens the immersion even further. This makes it differ from classic platformers which allow one to start and feel every single beat of the game at their own pace, instead when a player begins, it turns into a battle of quick reflexes, timing, and precision. Jumping from one level to the next introduces a new task that the level restricts, introducing everything from basic jumping to complex patterns and split second timing. Although the game is accessible on multiple platforms, the Geometry Dash APK for mobile allow players to experience the intense rhythm challenge wherever and whenever they want. The game's tough difficulty ensures that one wrong move sends you back to the beginning, with straightforward controls. This makes each completed level a hard-earned triumph. The game has earned the title of being notorious due to its difficulty. And this difficulty is what makes players come back for more. To the untrained eye, it may seem moderately straightforward - a square that goes through a series of obstructions. However, underneath this very basic design is a rather sophisticated, time-based, and concentration-intensive game. As the player advances further into the game and is able to complete certain sections, the difficulty level begins to rise until the final stage where the level is the most difficult of them all. At the early levels, players should have good instincts and fast reflexes, but at the later levels, those who do not develop reason and repetition, do not make it further. Success requires the player to memorize the rhythm and motion of each level. Most of the enjoyment of the game comes from the mixture of the instinctive side of playing, and the highly strategized side of planning everything out in advance. What adds to the overall satisfaction and pleasure of the game Geometry Clash is the term of satisfaction after a great struggle that is followed by a struggle as a result of instant feedback and quick loading screens. Being able to instantly be able to jump back to where you left off after failing cuts down the amount of time a player would have to wait before getting back in-game and picks between the anger of not progressing and the struggle of progressing. An important alteration is the character's customization in the game. This allows the players to select from an array of icons and effects as they are in the game that enables them to make an in-game character that represents their progress and success in the game. You can listen to musicians, unlock characters, find skins by finishing levels or collecting coins. This can simply increase your status in the game with each new icon that one earns. If distortion visuals or a simpler and cooler one appeals to you then you can find custom skin. One can customize icons and change items like cubes to waves including obtaining a spaceship. These all are different vehicles in the game and one can change how they look. Changing the colors of the icons is also allowed, making the customization more enhanced. You may be wondering how the game can get when you discover numerous icon sets, unlockable by custom achievements. In 2.2, APK the focus has always been on insisting game milestones to provide motivational cues and rewards. Each achievement makes it different from its quality. It has many features like customization of its levels, changing characters, an amazing soundtrack, high-resolution graphics, etc. Here we mention the details of its exciting features. How to download and install a complete guide If you know the requirements of the geometry dash apk full version free download, you can easily download and install it on any device. Here, we explain downloading and installing in detail. Open the official website you can find the download button. Click the button. After a few minutes, download geometry dash apk file. Open the apk file and click on the install button. After installing you can enjoy this amazing game. tips and tricks to master Geometry Dash 2.2 apk To play the Geometry Dash apk, you need patience, timing, and effort to master. Here are some tips and tricks to help win the games. To learn about the restrictions and methods of this game, you can watch the videos of other players. After watching others' experiences, you can improve your skills. There is a lot of concentration and focus in the geometry dash 2.2 apk full version. After playing in a quiet environment, you can increase your speed and accuracy. After using various control settings you can choose the best for you. Practice is the key to mastering any game. If you practice daily, you can get more mastering on Geometry Dash 2.2 apk. If you are studying the layout of every level you can get a significant advantage. After using these strategies, you can perfect your timing. During playing this game you can take a break. During the game, relax for a few minutes and clear your mind. In conclusion, Geometry Dash is an addictive game that offers endless entertainment through its challenging gameplay, stunning music, and creative levels. Whether you're looking for the Geometry Dash APK, hacks, or playing the game online, there are plenty of ways to experience this fantastic game. Download the Geometry Dash 2.2 APK today and get ready to test your reflexes like never before! In order to comprehend the latest version of the game, it is essential to understand the history of the game and how it developed over time. The game was introduced in 2013 as a mere 7 level rhythm-based platformer title. Designed and marketed by Robert Topala through his studio RobTop Games, the game has enjoyable elements of music together with gaming fun. The mere mechanism was controlling a square and rhythmically jumping on the tumblers. But it quickly grew into much more. Every update release came with the introduction of new levels, features, vehicles and game modes. Later on, RobTop himself popularized the level editor, which allowed players to generate and share their own levels and made the game more of a community driven game. It was in 2017 also, with the patch 2.1 release that new elements such as new gameplay mechanics, secret coins and the Spider vehicle were added. In conclusion, Geometry Dash is an addictive game that offers endless entertainment through its challenging gameplay, stunning music, and creative levels. Whether you're looking for the Geometry Dash APK, hacks, or playing the game online, there are plenty of ways to experience this fantastic game. Download the Geometry Dash 2.2 APK today and get ready to test your reflexes like never before! In order to comprehend the latest version of the game, it is essential to understand the history of the game and how it developed over time. The game was introduced in 2013 as a mere 7 level rhythm-based platformer title. Designed and marketed by Robert Topala through his studio RobTop Games, the game has enjoyable elements of music together with gaming fun. The mere mechanism was controlling a square and rhythmically jumping on the tumblers. But it quickly grew into much more. Every update release came with the introduction of new levels, features, vehicles and game modes. Later on, RobTop himself popularized the level editor, which allowed players to generate and share their own levels and made the game more of a community driven game. It was in 2017 also, with the patch 2.1 release that new elements such as new gameplay mechanics, secret coins and the Spider vehicle were added. This expansion was important as it broadened the already rich gameplay offered by the game as well as improved replayability. The last time we saw a hint of the developments was when 2.2 was released in the year 2024. This patch is said to carry features that expand on what the moniker platformer has come to be known for, and you can now enjoy Geometry Dash 2.2 APK on your mobile devices. The question on everyone's mind, how is it played? Simply put, this is a rhythm-based platformer. A player is presented with a small square avatar on a map where the only button that is pressed because the character cannot come to a stop, is the jump button. The level is designed so that the beats of the music coincide perfectly with the jumps, which heightens the immersion even further. This makes it differ from classic platformers which allow one to start and feel every single beat of the game at their own pace, instead when a player begins, it turns into a battle of quick reflexes, timing, and precision. Jumping from one level to the next introduces a new task that the level restricts, introducing everything from basic jumping to complex patterns and split second timing. Although the game is accessible on multiple platforms, the Geometry Dash APK for mobile allow players to experience the intense rhythm challenge wherever and whenever they want. The game's tough difficulty ensures that one wrong move sends you back to the beginning, with straightforward controls. This makes each completed level a hard-earned triumph. The game has earned the title of being notorious due to its difficulty. And this difficulty is what makes players come back for more. To the untrained eye, it may seem moderately straightforward - a square that goes through a series of obstructions. However, underneath this very basic design is a rather sophisticated, time-based, and concentration-intensive game. As the player advances further into the game and is able to complete certain sections, the difficulty level begins to rise until the final stage where the level is the most difficult of them all. At the early levels, players should have good instincts and fast reflexes, but at the later levels, those who do not develop reason and repetition, do not make it further. Success requires the player to memorize the rhythm and motion of each level. Most of the enjoyment of the game comes from the mixture of the instinctive side of playing, and the highly strategized side of planning everything out in advance. What adds to the overall satisfaction and pleasure of the game Geometry Clash is the term of satisfaction after a great struggle that is followed by a struggle as a result of instant feedback and quick loading screens. Being able to instantly be able to jump back to where you left off after failing cuts down the amount of time a player would have to wait before getting back in-game and picks between the anger of not progressing and the struggle of progressing. An important alteration is the character's customization in the game. This allows the players to select from an array of icons and effects as they are in the game that enables them to make an in-game character that represents their progress and success in the game. You can listen to musicians, unlock characters, find skins by finishing levels or collecting coins. This can simply increase your status in the game with each new icon that one earns. If distortion visuals or a simpler and cooler one appeals to you then you can find custom skin. One can customize icons and change items like cubes to waves including obtaining a spaceship. These all are different vehicles in the game and one can change how they look. Changing the colors of the icons is also allowed, making the customization more enhanced. You may be wondering how the game can get when you discover numerous icon sets, unlockable by custom achievements. In 2.2, APK the focus has always been on insisting game milestones to provide motivational cues and rewards. Each achievement makes it different from its quality. It has many features like customization of its levels, changing characters, an amazing soundtrack, high-resolution graphics, etc. Here we mention the details of its exciting features. How to download and install a complete guide If you know the requirements of the geometry dash apk full version free download, you can easily download and install it on any device.
